

Nature-Based Climate Change Adaptation Resources

“The Climate Change Adaptation Resource Pathway (ARP) is designed to help adaptation practitioners at all levels traverse the vast array of information available on natural and nature-based climate change adaptation solutions.”

The Natural Infrastructure Technology Applications Sheet outlines and concisely explains the benefits of each technical element in a living shoreline, green roof, and vegetated bioswale. Information is available in both English and French, with local case studies for reference.

The Top 10 Municipal Actions for implementing Nature-Based Climate Solutions in Canada provides some examples of what municipalities across the country are doing that could inspire other municipalities to implement. The actions are not limited to shorelines.
